CASE STUDY  
The Hospital Club

## Overseeing Entire LED Lighting Installation

### KEY INFORMATION

- **THE CLIENT:**  
The Hospital Club
- **EVENT:**  
LED Lighting Installation at Gallery Space
- **PRODUCTION TEAM:**  
Lee Dennison - WL's Head of Business Development  
Chris Harris - WL's Business Development Manager  
Dominic Monroe - Operations Manager, The Hospital Club
- **BRIEF:**  
To oversee the entire LED lighting installation at the prestigious Hospital Club in Covent Garden.
- **PROJECT TIMELINE:**  
Planning: Three months.  
On-site Prep: 5 days
- **EQUIPMENT INVENTORY:**  
44 x Philips Selecon Wing LED Wall Washers, 22 x ETC Irideons, Q-interactive Scene Station.

The Hospital Club is a unique private members club located in Covent Garden. Alongside an award-winning television and music studio, this seven story building also features a Gallery space in which WL recently installed a brand-new LED lighting system.

The Gallery Space is one of the busiest at The Hospital Club, regularly hosting a range of work from art exhibitions to product launches to sculptures. The previous rig had standard track lighting with 22 x 500w floodlights and 12 x 100w spotlights. This was all connected to a mains voltage dimming system that was unnecessarily using a lot of energy and money.

The decision was made to install an LED lighting system. After visiting the site and demonstrating a range of equipment, WL decided that the Philips Selecon Wing LED Washers were the most suitable for the space - due to their high performance LED engine which delivers beautifully blended, homogenous beams of light. The fixtures can also pick up specific items meaning they can accentuate whatever is on display within the Gallery.

Alongside the Washers, WL installed 20 x ETC Irideons, with the fixture's FPZ zoom able to create a sharp or soft focused light in any shape required. To offer ease-of-use for those using the space, WL installed the Q-interactive Scene Station which allows complete control over all lighting fixtures.

## Working Closely with Venue and Manufacturer

### PLANNING & APPROACH

"We made several visits to the Gallery yet, as the Space was open to the public, we had limited time on site. As a solution, we recreated the Gallery Space's dimensions in our state-of-the-art Studio15. This meant we were free to experiment and decide what equipment would fulfil the brief. We did this in collaboration with The Hospital Club team, led by Operations Manager Dominic Monroe, who regularly visited our London base".

Chris Harris  
WL's Business Development Manager

### EQUIPMENT

Once it was decided that the Philips Selecon Wing LED Washers were being utilised, WL contacted Philips who became involved with the installation, choosing lighting positions that would get the most out of the space. The ETC Irideons, designed specifically for architectural environments, also use gobos meaning the lights can be custom-designed for visiting clients. WL supplied the space with four lighting pre-sets and LSC Splitters were also installed to provide wireless DMX distribution between the fixtures and control panels.

### RESULTS

"We are absolutely delighted with the installation and service that WL provided. The space has been transformed and the huge array of options and features now available to both ourselves and our clients is astonishing. We are really grateful for WL's guidance throughout and have immediately noticed the benefits of the new set up within the Gallery Space."

Dominic Monroe  
Operations Manager, The Hospital Club
